STRETCH FORMING CORPORATION

Architectural Metal Curving and Fabrication

For More Than 30 Years The Industry Leader

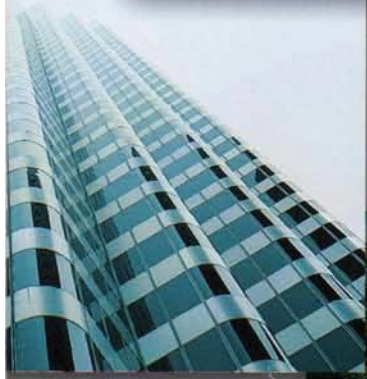

Metal Curving, Fabricating and Finishing

Holding tolerances during curving... that's what it's all about. If it doesn't fit, it won't work! Our experience with the Aerospace and Aircraft industries allows us to curve metal to closer tolerances than you'll probably ever need. We do our job right, which makes it easy for you to do your job well. It is because of these simple facts that our company is the preferred choice for quality metal curving.

Stretch Forming Process

In curtain wall applications, any number of intricate or oddly shaped sections must snap together into a single unit without gaps or distortion. The finished wall must retain structural integrity and be free of blemishes which could destroy its aesthetic appeal. Our metal curving process, **STRETCH FORMING**, meets all of these requirements. The metal to be

Years...

Leader In Metal Curving

formed is gripped at the ends and stretched around a forming die to produce the desired radius. This simultaneous stretching and curving process has a decided advantage over all other forming methods; there is no surface marring, perpendicularity of surfaces is assured, and consistency of tolerances from part to part is maintained. **STRETCH FORMING** is a process that is compatible with most metals utilized in the construction industry.

Technical Assistance

By knowing the end use of the curved section you're specifying, we can assist you in selecting the optimum material for your project. If you have any questions regarding technical or engineering data we are always available to assist.

The Secret to Success

Success is an attribute that is achieved through dedication and hard work. We believe that in order to find success you need to look at a company's basic business principles.

At SFC our business philosophy is "A Religious Commitment to Quality, Delivery and Customer Service". We have made it our mission to make your project hassle free from beginning to end. In order to ensure this we employ the most experienced stretch press operators, die makers and customer service staff. When SFC is your metal forming supplier, quality, delivery and customer service are guaranteed.

In the end it is about you and your project. If you want the best quality curved product, delivered on time, with no frustrations, delays or extra costs, then SFC is the company for you.

Price, Quotes and Delivery

By gathering just a small amount of information, we can, in most cases, quote a job within hours. Usually, the information can be taken over the phone or via e-mail; however, if the job has unique requirements, please fax your specifications or prints.

Pricing is affected by size, quantity, etc. and thus must be quoted on a job by job basis.

Cost savings in relation to other curving methods can be dramatic. Further savings can be realized due to our ability to eliminate fabrication steps on the curved sections. Almost any type of contour can be curved with some amount of continuing straight sections at either end of a curve or on both ends, thus eliminating the costly fabrication steps of welding the straight sections.
